

## LIMITER/AMPLIFIER

The TBA750C is a limiter/amplifier with f.m. detector, d.c. volume control and a.f. preamplifier. It is intended for 4,5 MHz, 5,5 MHz or 10,7 MHz. The limiter/amplifier is a four-stage differential amplifier that gives very good noise and interference suppression. The detector is of the balanced type. The d.c. volume control stage has excellent control characteristics with a control range of more than 80 dB. The a.f. preamplifier can drive a triode-pentode output stage or a class-A push-pull transistor output stage.
